Swedish (native) | English (fluent)

PROFILE

Junior software engineer with a background in data engineering and applied AI, and Python as my strongest language. I have built production data pipelines and developed web applications through studies and personal projects. I enjoy understanding users' needs and turning them into practical solutions, while continuing to grow as a developer.

TECHNICAL SKILLS

Python and backend: Python, FastAPI, Flask, REST APIs, PostgreSQL, SQLAlchemy, Alembic, Pydantic

AI integration: RAG, LLM APIs, vector embeddings, semantic search, Vertex AI, Hugging Face

Data systems: SQL, PySpark, Azure Databricks, Delta Lake, ETL/ELT, pandas

Testing and delivery: pytest, Ruff, Git, GitHub Actions, Azure DevOps, CI/CD, Docker Compose

Frontend: React, TypeScript, JavaScript, HTML/CSS - education and projects

Security and quality: JWT, Argon2, data validation, GDPR, anonymisation, access control

PROFESSIONAL EXPERIENCE

Analytics Engineer | Avtalat

Jan 2026 - Jun 2026

LIA internship

- Extended a production data application in Python, PySpark and Spark SQL, supporting additional API data sources and analytical use cases.
- Implemented reproducible processing and validation for NLP analysis of 21,000+ incidents, with GDPR-compliant anonymisation.
- Worked with business stakeholders to translate reporting needs into data models, DAX measures and usable solutions.

Data Engineer | Fora AB

Nov 2025 - Jan 2026

LIA internship

- Built an end-to-end Python data service ingesting 80,000+ REST API records into an Azure Databricks lakehouse.
- Implemented incremental processing, validation, error handling and protection against incorrect overwrites.
- Designed a Gold-layer data model supporting downstream APIs, semantic models and reporting.

EDUCATION

AI Developer | JENSEN Yrkeshögskola

2024 - 2026

Higher Vocational Education (YH), 400 credits, two years full-time. Graduated June 2026.

ADDITIONAL EXPERIENCE

Machine Operator | Delicato AB

2022 - 2025

Production, quality control and technical troubleshooting. Vice-chair of the local union club.

Selected projects

Python services, AI integration and data-intensive applications

Homie API

FastAPI backend - in progress

- Developing an independently deployable FastAPI and PostgreSQL service for household task tracking, with authentication, migrations and an OpenAPI contract for a separate frontend.
- Added pytest coverage, Ruff checks, GitHub Actions CI, a multi-stage Dockerfile and Docker Compose configuration.

Python | FastAPI | PostgreSQL | SQLAlchemy | Alembic | pytest | Docker Compose

RAG Learning Assistant

Document processing and generative AI

- Built a Flask backend that ingested documents, created embeddings and supported grounded answers, semantic search and quiz generation.
- Integrated the service with Vertex AI, Google Cloud Storage and a React user interface.

Python | Flask | Vertex AI | Google Cloud Storage | React | RAG

AI Assistant Frontend

Team project

- Developed parts of a React application with routing, forms, authentication state and Axios integrations with backend AI endpoints.

React | JavaScript | Vite | Axios | React Router | Cypress

Semantic Drift in Swedish Legislation

Reproducible Python and LLM evaluation

- Built an API-to-lakehouse pipeline and deterministic measurement framework with source snapshots, SHA-256 validation, tests and reproducible runs.

Python | PySpark | REST API | DuckDB | pytest | LLM APIs

NLP Clustering of ITSM Data

Graduation thesis

- Developed a reproducible NLP pipeline on 21,000+ production incidents and identified 72 potential problem records.

Python | Databricks | sentence-transformers | UMAP | HDBSCAN | MLflow
